Study of J2Me with Hello world

This is the simple hello world application. In this example we are creating a form name "Hello World" and creating a string message "Hello World!!!!!!!" as below:

Form form = new Form("Hello

World");String msg = "Hello

World!!!!!!!";

In this application, To display the message we are using append method with the form as below:

 form.append(msg);

The Application is as follows:

Code:

```java
import javax.microedition.lcdui.*;
import javax.microedition.midlet.*;

public class HelloWorld extends MIDlet{
    private Form form;
    private Display display;

    public HelloWorld(){
    super();
    }

    public void startApp(){
    form = new Form("Hello World");
    String msg = "Hello World!!!!!!!";
    form.append(msg);
    display = Display.getDisplay(this);
    display.setCurrent(form);
    }

    public void pauseApp(){}

    public void destroyApp(boolean unconditional){
    notifyDestroyed();
    }
}
```

Conclusion

Hence, we were able to perform the experiment.
